

Taking care of our earth

Land, water and air make up our earth.

Humans, plants and animals depend on the earth's land, water and air to live.

We pollute the land when we drop litter.

Factories pollute the air when they create smog.

Our sea is polluted with plastics and oil.

Plastic and oil kills fish and other sea life.

Natural resources are things found in nature that are valuable.

Natural resources are wood, water, coal, oil and soil.

We use natural resources to make things like paper and electricity.

We can save water by turning off the tap.

We have a responsibility to take care of the world.

We don't do this when we create rubbish.

We can reduce, reuse or recycle our rubbish.

We can recycle plastic, cardboard, glass, metal and paper.

Fruit, vegetables and garden waste can be composted.

Cooked food cannot be composted
