

# PLANTS

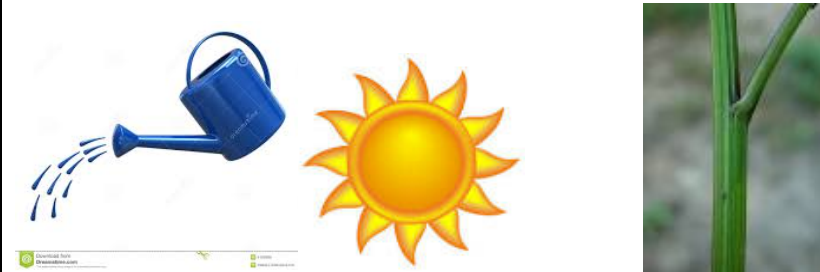

Plants are a type of living thing that we see all around us.

Plants need food, water and air to grow and stay alive.

Plants grow in different environments.

The stem supports the plant and carries water and nutrients to the various parts of the plants.

A plant makes its own food on its leaves.

Seeds are the beginning of new plants.

Bees collect nectar and pollen to make and use honey.

Bees are very important in plant pollination.

The roots anchor the plant and takes in water and nutrients.

Plants grow in different environments.

Some plants produce fruit to hold seeds.

Evergreen trees stay green all year.

Deciduous trees shed their leaves in winter.
