

# Bears

## Bears

Bears have 4 legs and paws. They have a vertebrate which means they have a backbone. Bears are mammals and they have fur covering their bodies. The mummy bear feeds the baby bear with milk. Some bears hibernate during the winter. They can live for 20-30 years.

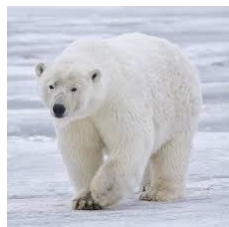

## Space

Planet Earth is one planet in the Solar System. There are 8 planets in the solar system which orbit the sun. The solar system is made up of comets, asteroids, meteoroids, planets and moons. The first person to step on the moon was Neil Armstrong in 1969. There are no animals or trees on the moon.

## Types of bears

There are 8 different types of bears in the world:

**Hibernate**- is when an animal sleeps during the cold winter months and wakes up in the spring when the weather is warmer.
