

In the Garden

Minibeasts

A minibeast is a living creature without a backbone. Minibeasts include snails, ladybirds and spiders. They are often found in our garden in the United Kingdom.

Growing

Plants, trees, flowers and produce grow in our gardens. These need water, sunlight and soil in order to grow.

We can grow different fruits and vegetables in our gardens which can be eaten as part of a healthy diet.

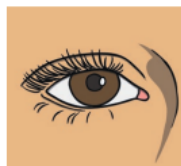

Five Senses

We have 5 senses:

hearing

sight

taste

smell

touch

Stewardship - to be proactive and look after God's world by caring for animals, plants, water and other people.
